

A B S T R A C T

AN INTER-LAMINAR SUPPORT

5 The invention relates to a vertebral support placed
between the laminae of the vertebrae. It is constituted by
an anterior zone (1) inserted between the laminae of the
vertebrae, suitable for giving an anatomical intervertebral
spacing, and a posterior zone (2) providing mobility in the
10 region fitted with the implant. Retaining means limit
displacement of the support by means of shoulders (3, 13)
projecting from the anterior zone (1) of the support, and
by means of two transverse projections (8).
